

Former Doerschel plot area torn up recently. Note salts on a very wet rainy day. When this stuff dried out, the entire surface looked like it had snow on it. Note Tom's new ride.

Soil pit in Doerschel waste. Note many color variegations, yellow hues from sulfur/sulfate ppts etc.. We described and sampled three pits like this and bulk sampled surface soil from all plots.

Species trial plots with biosolids plus 0 lime

Species trial plots with 2x biosolids plus lime.

**Revegetation demo area (lime plus biosolids)
adjacent to species trial plots.**

**Tailings revegetation species trial with/without lime
plus biosolids. Not much more to say?**
